

WHAT DO REAL PATIENTS SAY ABOUT THE GENTLEWAVE® PROCEDURE?

"Having a few root canals with unsuccessful results, I opted for the GentleWave® Procedure. I felt comfortable immediately and knew it was going to be successful because I did not feel the pressure and discomfort I felt with my past root canals. My tooth is feeling great! I would recommend this to anyone who needs a root canal."

- G. Yaghnani, Age 55, Encinitas, CA

"I was referred because of an abscessed tooth that was cracked, and I was very anxious after hearing many stories about root canals. My doctor shared this new technology called the GentleWave® Procedure. I was comfortable the entire time and I'm still feeling great a week later."

- A. Denson, Age 67, Texarkana, TX

"The GentleWave® Procedure my doctor used was amazing. It has been six days since my appointment—I cannot believe I had a root canal last Friday!"

- L. Marchetti, Lisle, IL

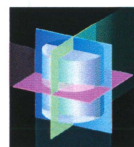

"After two painful standard root canal treatments, the GentleWave® Procedure was a comfortable and surprisingly relaxing experience! I was in and out in an hour and back to work. I would definitely recommend the GentleWave Procedure to my family and friends!"

- E. Simon, Age 38, San Marcos, CA

THE GENTLEWAVE® PROCEDURE IS A REAL ALTERNATIVE TO STANDARD ROOT CANAL TREATMENT

GENTLE WAVE®
PROCEDURE

keep it
real

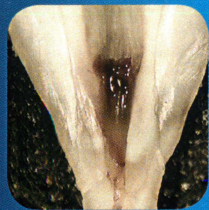

Preserve your natural tooth
with today's alternative to
standard root canal treatment.

WHAT IS A ROOT CANAL TREATMENT AND WHY DO YOU NEED IT?

The root canal of a tooth contains both nerves and blood vessels which keep the tooth alive and healthy. When this pulp-filled cavity becomes infected or inflamed, root canal treatment may be needed. Root canal treatment is a therapy which removes the infected tissue and bacteria throughout the canal system so the infection is less likely to return.

Standard root canal treatment uses a series of instruments and treatment fluids to remove the infected tissue and disinfect the root canal system. But standard root canal treatment can leave behind some of the infected tissue¹, especially if the tooth has a complex root system, which could increase your risk for re-infection. Not only that, it often requires multiple visits to complete.²

But there is a better way—a real alternative to standard root canal treatment. It's called the GentleWave[®] Procedure. Patients are saying it's more comfortable, more convenient and it preserves your natural tooth better than standard root canal treatment.³

STANDARD TREATMENT

Standard treatment cannot reach all the way into the root canal.

GENTLEWAVE[®] PROCEDURE

The GentleWave Procedure delivers unprecedented cleaning throughout the entire root canal system.

REAL CLEANING

The GentleWave System's technology uses broad spectrum acoustic energy and advanced fluid dynamics to flush away debris and tissue from your entire root canal system.^{4,6} It dissolves organic tissue up to 7x faster than conventional devices⁵ even cleaning microscopic spaces that can't be reached by standard root canal treatment.¹

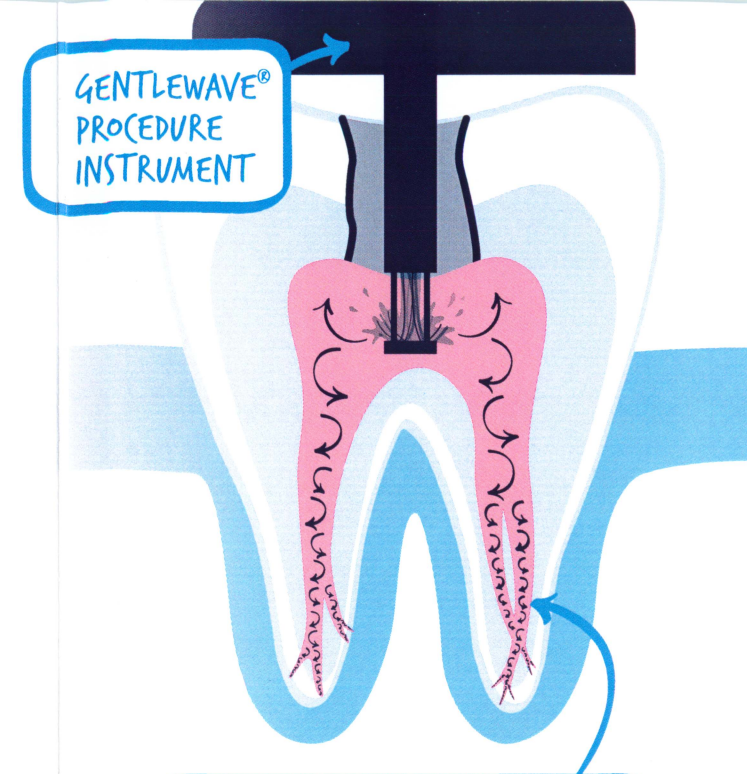

The GentleWave[®] Procedure cleans microscopic spaces that can't be reached by standard root canal treatment.¹

REAL COMFORT

Instead of relying on multiple instruments to clean the root canal system, following minimal instrumentation the GentleWave System uses a sterilized single-use procedure instrument to deliver broad spectrum acoustic energy and a powerful vortex of optimized procedure fluids throughout the canals. Many patients—especially those who have previously undergone standard root canal treatment—describe the GentleWave Procedure as comfortable.³

REAL CONVENIENCE

Standard root canal treatment often involves multiple visits to your dentist or endodontist.⁷ But the GentleWave Procedure can usually be completed in just one visit. It's ideal for patients with busy schedules.

GENTLEWAVE[®] PROCEDURE INSTRUMENT

THE GENTLEWAVE[®] SYSTEM USES BROAD SPECTRUM ACOUSTIC ENERGY AND A POWERFUL VORTEX OF PROCEDURE FLUIDS TO FLUSH AWAY DEBRIS AND TISSUE FROM THE ENTIRE ROOT CANAL SYSTEM.^{4,6}

AND YOU CAN KEEP YOUR NATURAL TOOTH

Some patients who need root canal treatment opt instead for having their tooth removed and replaced with a dental implant. But dental implants require extracting the tooth, followed by multiple surgeries to insert a metal post in the jaw and affix a porcelain crown to the post. These surgeries often can take three or more visits to complete.⁸ The GentleWave Procedure is designed to help you save your natural tooth, and is usually completed in just one visit.
